

Key messages

- There are **many kinds of cyberbullying** - hurtful texts, non-consensual image sharing, exclusion, imitating.
- About **50% of cyberbully is by someone known** in real life and **50% by someone met online**.
- Cyberbullying is **often unreported** as young people **fear having devices taken from them**.
- **Signs of cyberbullying** and **things teachers can do to help** are listed.

Types of cyberbullying

Bullying is repeated behaviour towards an individual or group. Cyberbullying is when this

is done with the intent to harm another person or group. It can involve social, psychological and even, in

extreme cases, physical harm.

Cyberbullying can take place via:

- abusive texts and emails
- hurtful messages
- imitating others online
- excluding others online
- posting on social media about them
- spreading rumours
- posting images or videos online without their consent
- nasty online gossip and chat.

Technology and online engagement have become such an integral part of our daily lives that there is no real difference between our 'online' and 'offline' worlds now - bullying, is bullying. All bullying can cause shame, guilt, fear, withdrawal, social isolation, loneliness and depression. Cyberbullying has the added difficulty of being

permanently available to see and read over and over, adding to the hurt and fear.

It can be hard to escape cyberbullying. Nasty messages, videos and gossip can spread fast online and are hard to remove completely. Screenshots and copies can be easily made and shared widely with others. This makes it easier for cyberbullying to spread quickly and uncontrollably.

Often, the abusers/attackers can remain unknown to the victim, as they use a fake or anonymous account to hide their identity. This can make it difficult to stop, and harder for adults to see and manage.

Facts about cyberbullying

- Approximately 50% of victims know their **perpetrator** (usually another student at same school).
- Approximately 50% of victims met their perpetrator online and did not know them.
- People of all genders can cyberbully.
- Girls cyberbullying behaviours are more likely to be spreading rumours.
- Boys are more likely to post hurtful pictures or videos.
- Most cyberbullying occurs amongst mid-teens (ages 14-17).
- Perpetrators of cyberbullying are generally the same age as the victim.¹
- Only 7% of Australian secondary school students reported experiences of cyberbullying in the National Survey, although this number is estimated to be so low due to lack of willingness to report.
- The most common experiences of cyberbullying for Australian secondary students were being ignored or intentionally left out online, being prank called, and receiving nasty messages online or via text.²

Signs of a young person being cyberbullied

Reports from eSafety suggest that 1 in 5 young people (8-17 years old) have experienced cyberbullying, however, research shows students often don't tell an adult or report it¹. **They** fear we will remove them from the internet or their devices, therefore disconnecting them from supportive friends and family, and may overreact and make the situation worse. There are some signs you might be able to pick up at school that indicate a child may be the target of cyberbullying. Look for:

- reluctance to go to school
- falling behind in school work and homework
- unexpectedly disinterested or stops using the **computer**, their phone, tablet, or social media's.

- becomes withdrawn, distressed, anxious or lacking confidence
- becomes aggressive and begins to bully other young people
- disturbed or deprived sleep
- appears to be depressed, angry or frustrated after **computer**, internet, or phone use
- mood swings
- becomes anti-social and isolated from peers and family
- higher levels of absenteeism
- increased negative self-perception
- a decline in physical health
- becoming secretive about their online activities and phone use
- suicidal thoughts—this should be reported to the administration and the parents/carers immediately for appropriate **action**.

Cyberbullying can happen to anyone, however often the young people involved in cyberbullying are also involved in other kinds of bullying.

Responding to cyberbullying

- If you notice a child in your class or the school yard showing any of the above signs, or other worrying and out of character behaviours, tell them you are worried and want to help.
- If they are being bullied by a friend, talk to them about the situation and encourage them to talk to a counsellor or a trusted adult (another teacher, guidance officer or school principal).
- Keep a record of any incidents and report them to the relevant staff to do the same, particularly at recess and lunchtime.

and lu

nchtime.

- If they seem disconnected from others encourage them to join lunchtime groups and recruit kind and supportive students to look out for them.
- If other students appear to be targeting them or excluding them, enact appropriate consequences as per the school's bullying policy.
- Any significant concerns should be discussed with the student and their parents or carers.
- Students should be provided with options for psychological support including school counselling or anonymous counselling through the Kids Helpline on 1800 551 800.
